

I have listened to the ARRL audio of interference due to Broadband over Power Lines, and find this level of interference to be intolerable to the Amateur Radio Service frequencies. It is now obvious that the Part 15 field strength limits are significantly too large for this kind of BPL service to operate in harmony with other users of the radio spectrum. BPL must be stopped until it is demonstrated that it will not interfere with weak signal operation in the Amateur Service frequencies.

Regards,

Charles A. Schultz, KE4NNF
